Human Research: Self-Service Learning and Aids

Information and tools to help you manage your human research projects, whether you are a new investigator starting your first study or an experienced researcher with dozens of studies under your belt.

Started Mar 4, 2022

Free
If you are involved in research of human subjects, your priorities are protecting the rights, safety, and welfare of the participants and collecting high quality data. Whether you are planning a chart review, a survey, a single-site study, or a multisite clinical trial, the information in this course will provide you with the information and skills you need to achieve your goals efficiently and effectively. You will be able to choose the topics you need or want to learn about, and gain access to templates and worksheets to help you run your study and assure your compliance with the regulations.
Do you have something to contribute?

• Suggestions for training topics
  • What did you not understand when you were new to research?
  • What do you need extra help with now?
  • What do you need quick reminders for?
• Tools or forms you use and would like to share
• Resources you find helpful
• Would you be willing to test and provide feedback on new material?
